JAS-Anz accredited [ISO 9001 Certification in Noida](#) | Applicable to all companies | Internationally valid | competitive quote | 9962590571

If an SME (small- to medium-sized enterprise) keeps on struggling with its routine quality issues, then there are far fewer chances for the business to sustain and grow. Thus, the most beneficial tool for an SME to attain sustainability in its processes is **ISO 9001 certification**. A small business can benefit significantly from the systematic process approach that the **ISO 9001 standard** provides

Why ISO 9001 certification?

The ISO 9001 standard is a basic framework for any organization – large or small – to ensure a good Quality Management System (QMS). The purposes of the standard are to allow a company to provide higher levels of customer satisfaction, along with consistently supplying products or services that meet customer requirements, as well as to achieve business goals and targets and to maximize profitability. ISO 9001 Certification Body can help a small business in business process consistency and supplier relations.

Examples of how ISO 9001 helps SMEs:

- ISO 9001 certification requires the business to ensure that all materials are purchased from suppliers that have been evaluated based on quality criteria, and these suppliers must be re-evaluated at defined intervals to ensure ongoing material quality and consistent supply chains.
- ISO 9001 certification can help SMEs to increase their business – and eventually, their profitability – by building up a business with the customers for whom certification is a contractual requirement.
- ISO 9001 allows SMEs to gain a clear understanding of their business by gathering all of the valuable business information and data mandated by the various standard requirements. Some examples include risk management processes, the context of the organization, customer feedback, and reviews, results of internal audits and management reviews, analysis of corrective actions, product or service complaints, etc.
- ISO 9001 provides the basis to develop a system that increases confidence in the company's stability while providing reliable, recorded information and data to identify and move forward with potential improvements.
